

▶ An abundant supply of clean natural gas
▶ \$365 million in state and local tax revenue

▶ **27,000 New York jobs**

That's the promise of developing the Marcellus Shale

Natural gas and oil jobs are poised to drive New York State's economic recovery. New York sits on the Marcellus Shale, one of the largest supplies of natural gas in America. Exploring for and producing this clean-burning energy could generate more than \$365 million in state and local tax revenue by 2020 – and support over 27,000 local jobs.*

With hydraulic fracturing, a process that recovers natural gas from deep below ground, we have the know-how to safely and effectively unlock this resource while protecting our environment. In fact, hydraulic fracturing is a technology that has been used since the 1940s in more than a million U.S. wells. That's great news for America's energy security – and jobs and economic prosperity here in New York.
